

✓ Deploying AI

Assignment 1: Evaluating Summaries

A key application of LLMs is to summarize documents. In this assignment, we will not only summarize documents, but also evaluate the quality of the summary and return the results using structured outputs.

Instructions: please complete the sections below stating any relevant decisions that you have made and showing the code substantiating your solution.

✓ Comments

Procedure

(Selected text): [Managing Oneself, by Peter Druker](#) Two solution strategies were tried. **Strategy that showed the best results: Approach B**

Approach A

- From the original text, only the pages containing the main text were parsed into the summarization and evaluation pipeline
- Summarization was performed on an "uncleaned" and "cleaned" versions of the text. Cleaning aimed removing text that could break the flow (and meaning) of the text, e.g., "This document is authorized for use... or 800-988-0886 for additional copies."
- Summarization and summarization evaluation were implemented as a class to ease the use of required APIs
- Summarization evaluation mentioned above is a weighted score set as follows, summarization - 40%, clarity 20%, tonality 20%, safety 20%
- Summarization was given a higher weight as I wanted to focus on the main task at the time I implemented safeguards using the results of evaluations.

Approach B

- From the original text, only the pages containing the main text were parsed into the summarization and evaluation pipeline
- Summarization was performed on a "cleaned" version of the text. Cleaning aimed removing text that could break the flow (and meaning) of the text, e.g., "This document is authorized for use... or 800-988-0886 for additional copies."
- This approach performs a "drill" summarization which aims to create a starting point for the summarizer
- First, two summaries are created. Later, both summaries are evaluated (using ai-as-a-judge). The best scored summary is used as reference for the final task
- In the final summarization task, the model is provided with the example summary and the reasons from the evaluation
- Summarization evaluation returns a weighted score set as follows, summarization - 40%, clarity 20%, tonality 20%, and safety 20%
- This approach relies on providing evaluated context to the model.
- This approach includes more detailed prompts and sequential tasks, which could be a contributing factor to the improved weighted score **Note: For both approaches, all queries were made using a personal OpenAI key**

Results Discussion

Did you get a better output? Why? Do you think these controls are enough?

Approach A

- Without performing further cleaning on the text, the outputs and corresponding evaluations got worse as I changed the prompts.
- However, by cleaning the text, i.e., removing text that could interfere with the flow of the article, the weighted summarization evaluation score improved.
- In general, the original prompt, less restrictive, performs better than the rest of the prompts. It seems that by adding restrictions to the prompt, the model gets "less creative" in the usage of the tone and vocabulary requested through the `(system prompt)`.
- While I was configuring the system prompt (`(information)`), I noticed that a higher temperature resulted in the introduction of more slang and even, words out of context into the summary. In this sense, the temperature was set to 0.5 instead of the default 1.0.

Approach B

- Yes, the results were improved. Providing more context to the model seems to be effective in terms of improving the evaluation score
- Within the evaluation, the summarization score was also improved. Something that had been difficult with Approach A.
- Approach B includes more controls than Approach A. It limits the tasks that the agent can complete, it is also given clearer and more specific tasks.

Future work

- Implementation of a custom rubric using a [CustomGEvalTemplate](#) and more robust pydantic outputs
- Another form of evaluating the firstly generated summaries that could save resources compute resources and time
- Refactor code to test prompt controls

Select a Document

Please select one out of the following articles:

- [Managing Oneself, by Peter Druker](#) (PDF)
- [The GenAI Divide: State of AI in Business 2025](#) (PDF)
- [What is Noise?, by Alex Ross](#) (Web)

Load Secrets

```
%load_ext dotenv
%dotenv ../05_src/.secrets
```

```
# Load libraries

Load Document

Depending on your choice, you can consult the appropriate set of functions below. Make sure that you understand the content that is extracted and if you need to perform any additional operations (like joining page content).

PDF

You can load a PDF by following the instructions in [LangChain's documentation](#). Notice that the output of the loading procedure is a collection of pages. You can join the pages by using the code below.

```
document_text = ""
for page in docs:
    document_text += page.page_content + "\n"
```

Web

LangChain also provides a set of web loaders, including the [WebBaseLoader](#). You can use this function to load web pages.

▼ Data

```
def load_docs(

```
# clean text with hard coded regex
preproc_doc = clean_text(doc_main)
```

▼ Approach A

▼ Generation Task

Using the OpenAI SDK, please create a **structured output** with the following specifications:

- Use a model that is NOT in the GPT-5 family.
- Output should be a Pydantic BaseModel object. The fields of the object should be:
 - Author
 - Title
 - Relevance: a statement, no longer than one paragraph, that explains why is this article relevant for an AI professional in their professional development.
 - Summary: a concise and succinct summary no longer than 1000 tokens.
 - Tone: the tone used to produce the summary (see below).
 - InputTokens: number of input tokens (obtain this from the response object).
 - OutputTokens: number of tokens in output (obtain this from the response object).
- The summary should be written using a specific and distinguishable tone, for example, "Victorian English", "African-American Vernacular English", "Formal Academic Writing", "Bureaucratese" ([the obscure language of beaurocrats](#)), "Legalese" (legal language), or any other distinguishable style of your preference. Make sure that the style is something you can identify.
- In your implementation please make sure to use the following:
 - Instructions and context should be stored separately and the context should be added dynamically. Do not hard-code your prompt, instead use formatted strings or an equivalent technique.
 - Use the developer (instructions) prompt and the user prompt.

```
class SummaryArticle(BaseModel):
    author_firstname: str
    author_lastname: str
    title: str
    keynote: str
    summary: str

class SummarizeArticle:
    def __init__(self, text, prompt="a concise and succinct summary"):
        self.text = text
        self.prompt = prompt
        self.response = None
        self.client = OpenAI()
        self.summary_evaluation = {
            'summary': None,
            'clarity': None,
            'tonality': None,
            'safety': None
        }

    def summarize(self):
        """Generate summary of the article
        """
        system_prompt = """
        You are a social media creator who communicates as if you were the rapper Eminem.
        You communicate mostly using Gen Z lore.
        When you provide summaries of articles, you do it in less than 1000 tokens.
        """

        prompt = f"""
        Provide the following:
        - Article author as "author_firstname" and "author_lastname"
        - Article title as "title": article in first-letter capitalized format
        - Relevance as "keynote": a statement, no longer than one paragraph, that explains why is this article relevant for an AI professional in their professional development.
        - Summary as "abstract": {self.prompt}

        for the article: {self.text}
        """

        response = self.client.responses.parse(

{'author_firstname': 'Peter',
 'author_lastname': 'Drucker',
 'title': 'Managing Oneself',
 'keynote': 'In the chaotic world of knowledge work, AI pros gotta be their own boss—knowing their skills, how they perform, and their values to ride the wave of opportunity and avoid getting ghosted by the
industry.',
 'abstract': '"Managing Oneself" by Peter Drucker drops wisdom for the knowledge era, suggesting that success comes from knowing your own strengths, values, and performance style. With careers now self-driven,
individuals must act as their own CEOs. Self-awareness is key—recognizing what you\'re good at, how you best learn, and what values you stand by. Drucker emphasizes the need for feedback analysis to spot and boost
strengths while acknowledging and minimizing weaknesses. It\'s about placing yourself where you can shine, constantly learning, and being ready to pivot. Values are crucial—align them with your work to stay
fulfilled and productive. The article underscores the importance of relationships and managing them by understanding others\' strengths and values. Finally, it explores planning for the later career stages,
advocating a proactive approach to a second career or parallel pursuits.'}
```

✓ Evaluate the Summary

Use the DeepEval library to evaluate the **summary** as follows:

- Summarization Metric:
 - Use the [Summarization metric](#) with a **bespoke** set of assessment questions.
 - Please use, at least, five assessment questions.
- G-Eval metrics:
 - In addition to the standard summarization metric above, please implement three evaluation metrics:
 - [Coherence or clarity](#)
 - [Tonality](#)
 - [Safety](#)
 - For each one of the metrics above, implement five assessment questions.
- The output should be structured and contain one key-value pair to report the score and another pair to report the explanation:
 - SummarizationScore
 - SummarizationReason
 - CoherenceScore
 - CoherenceReason
 - ...

Output()
Output()
Output()
Output()
{'summary': {'score': 0.625,
  'reason': "The score is 0.62 because the summary includes contradictions and extra information not present in the original text, such as minimizing weaknesses and planning for later career stages. Additionally, it fails to address specific conclusions made by the article's author, indicating a moderate level of accuracy and completeness."},
  'clarity': {'score': 0.6906138099967187,
  'reason': "The summary uses some Gen-Z lingo accurately, such as 'drops wisdom,' 'shine,' and 'pivot,' making the summary more engaging. The language is mostly clear and direct, and complex ideas are presented in an accessible way. However, the use of Gen-Z lingo is limited and not deeply integrated throughout the summary. There is minimal jargon, and when present, it is explained or used in context. The summary is well-written and easy to follow, but could be more engaging with a stronger, more consistent use of Gen-Z expressions. No major vague or confusing parts are present."},
  'tonality': {'score': 0.6971465032732989,
  'reason': "The output is generally clear, respectful, and demonstrates domain knowledge about Peter Drucker's 'Managing Oneself.' It avoids a condescending tone and ambiguous expressions. However, the ratio of informal language is somewhat high for a professional context, with phrases like 'drops wisdom,' 'act as their own CEOs,' and 'where you can shine,' which slightly detract from professionalism. Overall, the summary is accurate and well-structured but could be more formal."},
  'safety': {'score': 1.0,
  'reason': 'The output is free from profanities, hate speech, harassment, and does not recommend any external sources. It contains no personal or plausible personal information, hallucinated PII, or training data artifacts. The summary uses only anonymized, general content and does not expose sensitive information, fully aligning with all evaluation steps.'},
  'overall_score': 0.7275520626540035}

```

Enhancement

Of course, evaluation is important, but we want our system to self-correct.

- Use the context, summary, and evaluation that you produced in the steps above to create a new prompt that enhances the summary.
- Evaluate the new summary using the same function.
- Report your results. Did you get a better output? Why? Do you think these controls are enough?

✓ Experiment 2. Change Prompt I

```

prompt = """
A concise, objective, and engaging summary of the article.
The summary must avoid mentioning information not found in the article. The summary must be structured and must include
the main arguments and the conclusions drawn by the article's author contained in the article.
"""

```

```

# Create summarization object
response_obj_enh = SummarizeArticle(doc_main, prompt=prompt)

# Summarize article
response_obj_enh.summarize()
output_response_text = response_obj_enh.response.output_text
output_response = json.loads(output_response_text)

```

```
display(output_response)
```

```

 'abstract': "In 'Managing Oneself,' Peter F. Drucker lays down the blueprint for personal and professional success in a knowledge-driven economy. He stresses the necessity of self-awareness, urging individuals to identify their strengths through feedback analysis and use this understanding to improve performance. Drucker elaborates on the importance of knowing how one performs and learns, advocating for personalized strategies rather than one-size-fits-all approaches. He also points out the importance of aligning personal values with organizational values to avoid frustration and enhance effectiveness. Moreover, Drucker encourages professionals to understand their own contributions and to take responsibility for effective communication and relationships in their work environment. Finally, he highlights the need for planning the second half of one's career, suggesting that diversifying interests before reaching career plateaus can ensure both personal fulfillment and societal contribution. The insights aim to equip individuals with the mindset to navigate a 50-year professional journey with agility, self-monitoring, and strategic thinking."}

# Evaluate summary
response_obj_enh_ii.evaluate_summary(verbose=False)
summary_evaluation_enh = response_obj_enh_ii.summary_evaluation
display(summary_evaluation_enh)

```

Alright peeps, let's dive in. So, Peter Drucker dropped some wisdom about owning your hustle in this knowledge economy era. He's saying we gotta be our own CEOs and juggle the responsibility that comes with the crazy first things first, know your strengths because fact check: peeps often get that wrong. Use 'feedback analysis' to check your skills and let go of stuff you suck at, 'cause dragging a weakness to mediocrity is a massive energy suck. Drucker breaks it down - figure out how you roll: reader or listener, team player or lone wolf. Your performance style is personal like 90s baggy pants, so tweak it for ultimate slayage but don't try changing it completely. Values matter too. Know them and make sure they click with your job. If not, epic fail alert: serious nonperformance and frustration incoming.

He's not done yet though. Drucker's got more gems like finding the right spot where you can shine and contribute. Plus, plan that second career early 'cause nobody wants to retire staring at the skies clueless.

Managing oneself isn't just poppin' advice; it's a survival kit for AI peeps in this fast-changing world, helping you stay relevant and crush it.

 'abstract': "Alright peeps, let's dive in. So, Peter Drucker dropped some wisdom about owning your hustle in this knowledge economy era. He's saying we gotta be our own CEOs and juggle the responsibility that comes with the crazy opportunities out there.\n\nFirst things first, know your strengths because fact check: peeps often get that wrong. Use 'feedback analysis' to check your skills and let go of stuff you suck at, 'cause dragging a weakness to mediocrity is a massive energy suck.\n\nDrucker breaks it down - figure out how you roll: reader or listener, team player or lone wolf. Your performance style is personal like 90s baggy pants, so tweak it for ultimate slayage but don't try changing it completely.\n\nValues matter too. Know them and make sure they click with your job. If not, epic fail alert: serious nonperformance and frustration incoming.\n\nHe's not done yet though. Drucker's got more gems like finding the right spot where you can shine and contribute. Plus, plan that second career early 'cause nobody wants to retire staring at the skies clueless.\n\nManaging oneself isn't just poppin' advice; it's a survival kit for AI peeps in this fast-changing world, helping you stay relevant and crush it."}

 'abstract': "Peter F. Drucker's 'Managing Oneself' discusses the importance of self-awareness for achieving success in the knowledge economy. In an era where career longevity can stretch over 50 years, individuals
must act as their own CEOs, making strategic decisions about their professional paths. Key insights include understanding one's strengths, weaknesses, values, and the best ways to perform and learn. Drucker
emphasizes the necessity of focusing on strengths rather than trying to mitigate weaknesses and recommends using feedback analysis as a tool for discovering one's capabilities. Additionally, he highlights the
importance of aligning personal values with those of the organization to avoid frustration and nonperformance. Decision making, working relationships, and communication are crucial areas where clarity of self-
understanding can lead to better contributions and satisfaction in professional life. Ultimately, Drucker advocates for proactive career management, suggesting that professionals must anticipate changes and prepare
for a second career phase long before it becomes necessary, ensuring lifelong fulfillment and productivity."}

Success now requires individuals to manage their own careers by knowing their strengths, values, and how they perform best. Drucker advises using feedback analysis to discover strengths and improve upon them. Understanding whether you\'re a reader or listener is key to optimizing your learning style. Align your job with your personal values for real impact. Essentially, it\'s about being your own CEO and strategically navigating your career path. 🚀'},

                                         'reason': 'The score is 0.83 because the summary contains a contradiction regarding the understanding of learning styles, which is not addressed in the original text. However, it does not include any extra information, maintaining focus on the main points.'},
                                'c': { 'score': 0.8407333400045929,
                                        'reason': 'The response effectively incorporates Gen-Z vocabulary, such as \'CEO\' and \'navigating,\' which aligns well with the target audience. The language is clear and direct, making complex ideas about self-awareness and career management accessible. However, while it avoids jargon, the use of the rocket emoji may detract from the professionalism expected in a more formal evaluation. Overall, the writing is grammatically sound and presents ideas in an easy-to-follow manner."},
                                't': { 'score': 0.8407333400045929,
                                        'reason': 'The response maintains a good balance of formal and informal language, likely keeping the ratio below 0.7. It avoids a condescending tone and aligns well with Gen-Z by using relatable language and an engaging emoji. The content is clear and respectful, effectively conveying Drucker\'s ideas on self-management. However, it could be slightly more engaging with a stronger call to action or interactive elements to fully captivate the target audience."},
